Foam and foam products from the specialist

DISPLAY INSERTS

The display inserts are designed to present your products in the most appealing possible way. These are made of PUR or PE foam, depending on the application and product. The PUR foams are often colour foams that reflect less light and therefore have a particularly intensive colour. The more rigid PE foams are also available in an attractive range of colours. The perfect display insert can therefore be designed and produced for any product.

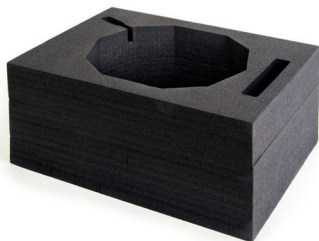

For example:

- PUR foam inserts for sales packaging
- PE foam display inserts for sample collections
- PE foam inserts for displaying exhibits
- Special PE foam inserts with a cork surface

TRANSPORT AND PROTECTION PACKAGING

Transport and protection packaging protects fragile articles against damage during shipping and storage. Both PUR and PE foams offer excellent options for the very best results. The optimum solution can be found for the weight and dimensions of the individual product due to the very wide spectrum of different densities and compression hardness options available. The high shock and impact resistance ensures optimum protection, even for the most fragile articles.

For example:

- PUR foam inserts for fragile products
- PE foam case inserts for technical equipment
- PE foam inserts for tools
- Covers and inserts made of PUR or PE foam

ORGANISATION INSERTS AND SHADOW BOARDS

Organisation inserts and shadow boards enable perfect tool control and management in tool trolleys, drawers, cabinets, at the workplace and on assembly lines. Due to its versatile and inexpensive processing properties, PE foam is the first choice for this application. In addition, a balanced blend of rigidity and flexibility that combines safe positioning with a firm grip makes the products pleasant to touch as well as guaranteeing robustness and durability. The use of different foam colours permits an even higher level of clarity, and makes it easy to check that all tools are complete at a glance.

Tell us about your requirements – we would be pleased to advise and inform you directly and personally

For example:

- Organisation inserts made of PE foam for article sets
- Inserts made of PE foam for tool drawers and cabinets
- Shadow boards made of PE foam in various colours
- Inserts made of PE foam for fan articles
- Organisation inserts made of PUR foam for collections

ADDITIONAL APPLICATIONS

If none of these examples match your requirements, this is even more reason to contact us! We have been developing and producing customised solutions made of foam and other cellular materials for more than 50 years. We place special emphasis on advising our customers on solutions to suit their individual wishes and requirements and providing support in selecting the optimum foam type as well as for product design. When advising our customers we not only make use of our in-depth know-how and experience, but also a comprehensive range of materials and processing options.

For example:

- Lasered logos and inscriptions
- Printed inserts
- Shape cut packaging
- Self-adhesive inserts
- Laminated material combinations

OUR FOAM IS SUSTAINABLY PROCESSED!
