Professional sponges for cleaning & care

More than 4,000 different products for a wide range of industries

VERSATILE & FLEXIBLE

- Custom manufacturing
- Flexible quantities
- Wide range of materials
- Outstanding processing depth

You will find more information about materials as well as possible applications and processing options for our foams on our website.

APPLICATIONS

- Industry & engineering
- Medical & rehab technology
- Packaging & protection
- Cleaning & care
- Advertising & promotion
- and many more

MATERIALS

- PUR flexible foams
- PE foams
- Sponge rubber & cellular rubber
- Recycled composite foams
- and many more

CLEANING & CARE

Foam materials are ideal for thorough, gentle cleaning and care – both in the professional world, where standards for suction power and durability are very high, and for domestic purposes, such as household cleaning or car care.

CLEANING SPONGES

The open cellular structure of polyurethane (PUR) flexible foam materials ensures superb water absorption. In addition, they are an excellent choice for combining with other materials such as scouring non-wovens, micro-fibre cloths, or other types of foam. Foam sponges thus guarantee thorough and gentle cleaning.

Examples

- Non-woven sponges with print for the professional sector
- Speciality sponges with scouring non-woven and microfibre cloth
- Hand sponges made of hydro foam for car cleaning
- Insect sponges made of prepolymer for glass cleaning
- Combination sponges made of different materials

APPLICATOR SPONGES AND CARE SPONGES

Polishes, waxes, and care products are often applied when cleaning or caring for certain items. Besides cloths and other applicators, flexible foam materials are particularly suitable for this purpose. Their open cellular structure ensures the absorption and controlled release of a larger amount of the product.

Examples

- Universal sponges for applying care products
- Hand-polishing sponges made of flexible foam
- Applicator sponges for car care
- Care sponges for leather cleaning and care

TILE SPONGES AND SPONGE PADS

PUR foam materials, which have a high absorption and retention capacity thanks to their open cellular structure, are used for tile sponges and tile washing boards. Reticulated types, such as our original hydro quality, are used in the professional sector, guaranteeing the highest professional standards and a long useable life.

Examples

- Professional sponges made of hydro foam for tile installers
- Sponge pads for tile washing boards
- Hydro pads with pattern or hook-and-loop fasteners
- Hand sponges made of prepolymer for epoxy grouting
- Super pads made of scouring non-wovens for epoxy grouting

GREEN CERAMIC SPONGES

Only high-quality, reticulated foam materials should be used for deburring and dressing green ceramic and porcelain. Reticulated foam materials are characterised by their particularly high absorption and retention capacity as well as their outstanding durability and long useable life.

Examples

- Machine sponges for the ceramic and porcelain industry
- Sponge rollers and sponge belts made of hydro foam
- Hand sponges for the manual processing of green ceramic
